# **Foreword**

Dear chess partisan,

It is with great pleasure that I hereby present you with Russian Grandmaster Alexey Dreev's "Practical Play in the Endgame", a continuation of "Practical Play in the Middlegame" (released in 2018, by Thinkers Publishing). Dreev has for the past three decades been internationally regarded as one of the most tenacious and consistent chess players in the world. His results speak for themselves, including, but not limited to, the World Blitz Championship Title, Gold Medals at the Chess Olympiad with the Russian national team, World Championships Candidate Tournaments, and numerous 1<sup>st</sup> place finishes at internationally renowned tournaments at the elite level such as "Wijk aan Zee" and "Biel" - to only name a few. Even more importantly, with respect to this book, Dreev has been able to draw from his extensive and direct interaction as a pupil with the legendary and instructive chess genius Mark Dvoretsky.

The author's aim in this volume is to improve the tournament chess player and professional alike in their ability to evaluate and execute crucial and hard-fought practical endgames - either in converting a winning position or holding a draw. This book will also sharpen the player's overall cognitive competences in practical situations, where the normal laws of endgame theory have little or no value. Dreev accomplishes this by providing categorized and detailed examples with clear commentary from his own tournament games, as well as from other Grandmasters' at the elite level.

Throughout the translation of this book from Russian to English, I have attempted to adhere as strictly as possible to the author's original content, so as to provide the most authentic experience between the reader and the author. Therefore, certain passages in the examples might appear unduly mechanical or dry from a purely linguistic standpoint. However, I have purposely chosen this path, to avoid any excessive wording or phrasing, and provide the reader with the most unequivocal, clear-cut access to the material without attempting unnecessary augmentations.

In conclusion, I believe that the examples in this book are of very high value for both elite and aspiring chess players - even in the 21<sup>st</sup> century, a time of computer analysis and evaluation. The works themselves come from the highest level of tournament play, and many of the examples have an "etude" feel to them, where the solutions are often quite nonstandard, yet entirely practical from a critical over the board situation. The book before you engages the reader in useful calculations all the while expanding the player's perception and confidence in a phase of the game where computer theory and preparation are of little value.

Sincerely, Alexander Hart Berlin, August 2019

# **Particular Endgames**

In this chapter, we will look at endings that contain a non-standard balance of material. Rare and uncommon endings will also be considered.

Obviously, it is quite difficult to get used to the unusual, since otherwise the unusual would become the habitual. However, it is necessary to improve a player's intuition in such unusual situations, as they frequently occur in practical games.

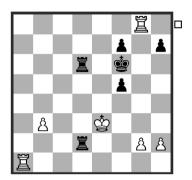

It can sometimes be a difficult task to assess the position in such an endgame, let alone find the correct moves.

Despite the active emasculation of our game, professionals, as well as amateurs, cannot get by without the use of figurative drugs (computers). Fortunately though, engines cannot completely cover all areas of the game.

The name of this chess Atlantis is the endgame, and its beautiful capital could certainly be located precisely in endgames with a non-standard material balance, of which we will see many examples.

#### Example 1

From Khismatullin – Inarkiev Satka 2018

The material is absolutely equal, but Black threatens mate in two moves.

### 

#### 44... h5

Black threatens to disturb the white rook with the h-pawn and White naturally tries to defend against this.

In the game, White hurried to set his passed pawns in motion.

#### Example 3

From Dreev – Balashov Odessa 1989

34... **≝e7**?!

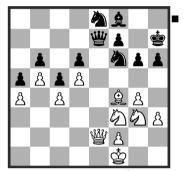

Seeing that the exchange of queens is almost inevitable, Black does a bit of "flirting"... Surprisingly, the fate of the entire battle was largely decided over this move.

34... 当xe2+ 35. 常xe2 g5 The black pieces are tightly packed, so it is important to seize as much space as possible. [To this purpose, also interesting is 35... 心h5 36. 急h2 f5=] 36. 急h2 心e8 37. g4 f5 38. gxf5 心g7=

From Dreev – Rausis Luzern 1993

At first glance, in this position White cannot count on any advantage, since Black has enough material in return for the queen and does not have any real weaknesses. However, at this very moment, White can create serious practical problems, if not obtain a serious advantage. How is this possible?!
